Our team of engineers have been working with 11kV transformers with services such as cable jointing, transformer testing, fault finding, maintenance, installation and repairs carried out on a daily basis.However, over the last few years we have been performing maintenance work with 33kV transformers that convert the power down to 11kV. This power can then be safely distributed in order to ...

It also depends on how the transformer is configured. If you have a single incoming winding with a intermediate winding then the output winding, then you will need a special symbol to reflect this. I haven't heard of a transformer like this but then again, I don't work with EHV systems, just HV (33/11kV and lower).

Has anyone found or built a 3 phase transformer for ACAD? I found the transformers under the circuit breaker / fuses (????) section, but they were only single phase. If one exists in ACAD, I can't find it. If someone else has already taken the time to build one, would you mind posting it? Thanks....
