Factoring numbers with the natural number set is simple. Every number has at least two factors. To find other factors, start dividing the number starting from two and working your way up until you reach that number divided by 2. Any quotient that does not have a remainder means that both the divisor and the

A Factor Tree Makes Factoring Easy . An easy way to factor a number is by making a factor tree. To make a tree, simply write the number you want to factor at the top of your paper. From there, make branches of factors - numbers that multiply to give you the original number. Next, take each of those numbers

Factor analysis in test construction It follows from this factor analytic model of test variance that factor analysis is the ideal method of test construction. Thus by administering items and subjecting their intercorrelations to factor analysis it is possible to select items which load on only one factor.
