Cat Circulatory Diagram

The Circulatory System of the Cat. The circulatory system of the cat is comprised of the heart, a network of arteries and veins, and the spleen (which serves as a blood reservoir). A cat's heart rate, beating from 110 to 140 times a minute, is almost twice the normal heart rate of a human. The cat's body contains half a pint of blood, and this blood is circulated through the body once every 11 seconds.

Cat Dissection- Circulatory System Flashcards | Quizlet

When dealing with the circulatory system, it is best to think of the vessels like a road map, one vessel leads to another with branches into these two vessels...etc. The cats have been injected with colored latex to make identifying the vessels easier. The arteries will have a pink color and the veins will have a blue color.

VCD - Vessels

A cat's cardiovascular system (or circulatory system) is the system responsible for circulating blood throughout the body. It consists of the heart and blood vessels, namely arteries, veins and capillaries. Where Is the Cardiovascular System Located?

Structure and Function of the Cardiovascular System in Cats

The sinoatrial node (SA-node) in the right atrium works like a small built-in timer. It fires off an electrical impulse in regular intervals (About 110-130 per minute when the cat rests and faster when the cat runs fast. This controls the heart rate.) Each impulse spreads across both atria which causes them to contract.
