initiated, which perhaps formed the basis of modern metrology. Engineering metrology deals with the applications of measurement science in manufacturing processes. It provides a means of assessing the suitability of measuring instruments, their calibration, and the quality control of manufactured components. A product that is not

ENGINEERING METROLOGY AND MEASUREMENTS

Introduction. Measurement encompasses different fields such as communications, energy, medical sciences, food sciences, environment, trade, transportation, and military applications. Metrology concerns itself with the study of measurements. Measurement is an act of assigning an accurate and precise value to a physical variable. The physical variable then gets transformed into a measured variable. Meaningful measurements require common measurement standards and must be performed using them.

I Dimensional metrology is that branch of Metrology which deals with measurement of dimensions of a part or workpiece (lengths, angles, etc.) I Dimensional measurements at the required level of accuracy are the essential link between the designer's intent and a delivered product. I The width, depth, angles and other dimensions all must be produced and measured accurately for the machine tool to function as expected. I Note: Metrology is a vast area. In this lecture, the main
