Guide to Operating Systems Security by Michael Palmer

Security refers to providing a protection system to computer system resources such as CPU, memory, disk, software programs and most importantly data/information stored in the computer system. If a computer program is run by an unauthorized user, then he/she may cause severe damage to computer or data stored in it.

Operating System - Security - Tutorialspoint

Operating systems play a critical role when it comes to protecting and securing resources present in our computer systems. When we are looking at the arrangement of a computer system, we first start at the level of hardware. At this layer, we have the CPU, physical memory, and other I/O devices. Direct use of hardware is really difficult.
